Lesson 1:

## Tipping in a Restaurant

**EXAMPLE**

Aaron, Rebecca, Caleb, Madeline, Connor, and Sophia all have dinner at the neighborhood restaurant. The bill comes to \$125, which they decide to split 6 ways. They also decide to give a 15% tip to the server. Find the amount due from each diner.

**Step 1** Calculate the tip and add it to the bill. Do this in one step by mentally adding the percent of the tip to 100%.

Notice  $100\% + 15\% = 115\%$   
 $\$125 \times 115\% = 125 \times 1.15 = \$143.75$

**Step 2** Divide by the number of diners. Round to the nearest 10 cents.

$\$23.95 = \$24.00$   
 $6 \overline{) \$143.75}$

Each person will pay \$24.

**Directions** Find the amount due from each diner. Round to the nearest 10 cents, if necessary.
